

Big pedestrian traffic light R6

The big pedestrian traffic light regulates pedestrian traffic during shutdowns. It has a crown and two transition signals at the top and is supplemented with two temporary traffic lights R6+. The large fully cast stand has room for four batteries. If you want to extend the operating time even more, it can advantageously be supplemented with a solar cell.

Push button with sound and light acknowledgment

A push button that emits sound, light and other tactile information that can be read using both sight and touch, for example through vibrations and raised symbols and blind text so that even people with visual or hearing impairments will know when it is safe to pass. The built-in noise control ensures that the volume is adapted to the environment.

Manage your traffic lights from BerlexConnect

When your traffic lights are in place, you can easily manage the administration from the BerlexConnect app.

In order to create a complete pedestrian crossing you need:

- ✓ two pedestrian traffic light units
- ✓ four new or existing traffic light R6+
